

7.3 解: (1) $G(s) = \frac{2.5}{s(1+s)(1+0.25s)}$ $G(j\omega) = \frac{2.5}{j\omega(1+j\omega)(1+0.25j\omega)}$

环节	转折频率	斜率	累计斜率
2.5	/	0	0
$\frac{1}{s}$	/	-20	-20
$\frac{1}{1+s}$	1	-20	-40
$\frac{1}{1+0.25s}$	4	-20	-60

$$L(\omega) = 20\lg 2.5 - 20\lg \omega - 20\lg \sqrt{\omega^2 + 1} - 20\lg \sqrt{1 + (0.25\omega)^2}$$

$$\varphi(\omega) = -\frac{\pi}{2} - \arctan \omega - \arctan 0.25\omega$$

由于采用滞后相位校正, 故 $\varphi(\omega_{c1}) = -180^\circ + 1^\circ + (5^\circ \sim 12^\circ) = -180^\circ + 4^\circ + 5^\circ = -135^\circ$

因此 $-90^\circ - \arctan \omega_{c1} - \arctan 0.25\omega_{c1} = -135^\circ$ 解得 $\omega_{c1} = 0.7 \text{ rad/s}$

故 $\frac{1}{\beta T} = \frac{1}{\omega_{c1}} = 0.07$ $\beta T = 14.286$

由于 $L(\omega_{c1}) = L(0.7) = -10\lg \beta$ 故 $\beta = 10^{-\frac{L(\omega_{c1})}{20}} = 0.347$

因此 $T = 28.818$

$$\therefore GCL(1) = \frac{1714.295}{1+28.825}$$

$$\text{综上, 校办厂现值为 } \frac{25(1+14.295)}{5(1+5)(1+4.255)(1+28.825)}$$
