

通信原理实验 1调制解调

姓 名: 张翠翠

办公室: 西一楼520

zhangcuicui@mail.xjtu.edu.cn

课程介绍

- 性 质:独立设课
- 学时数: 16学时(4学时*4次)
- 成 绩: 课堂验收(60%)+实验报告(40%)

通信原理实验安排-2020级-信息专业

	星期一	星期二	星期三	星期四	星期五	星期六	星期天
上午				信息 05	信息 02		信息 04
					(27人)		(25人)
							+2 名重
							修
下午	信息 06		信息 03				
	(27人)		(29人)				
晚上			信息 01				
			(32人)				

备注: 2022-2023 学年第二学期第 1-4 周

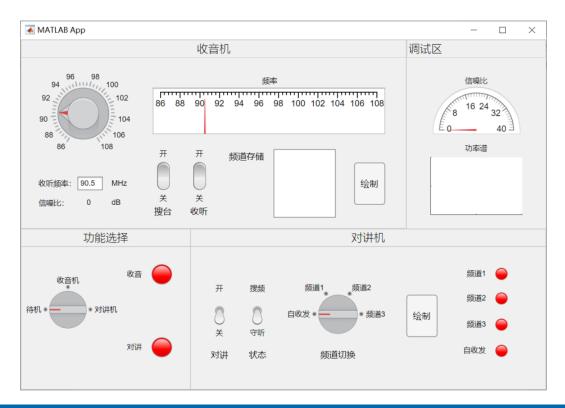

时间:第1周-第4周

地点: 西一楼506

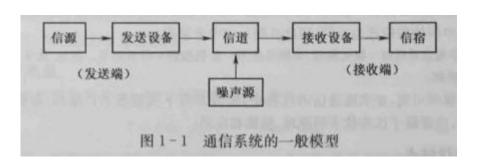

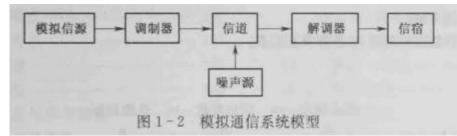

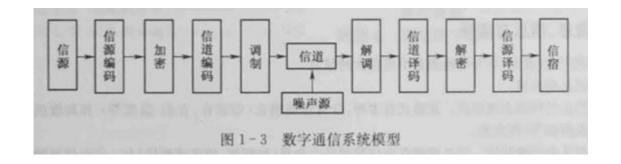

- 一个通信系统都包含哪些部分?
- PlutoSDR负责哪些部分?
- Matlab上负责哪些部分?

■ 通信系统的组成

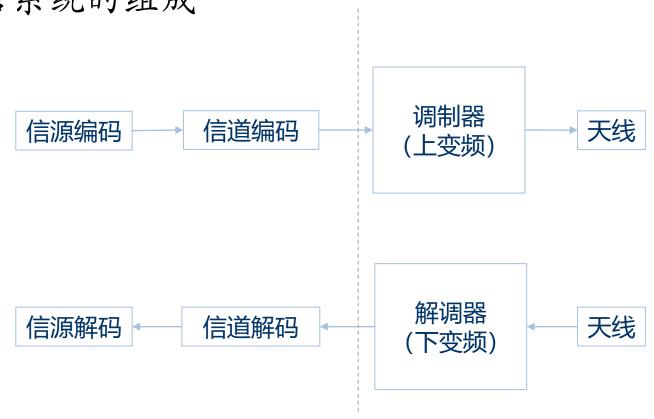

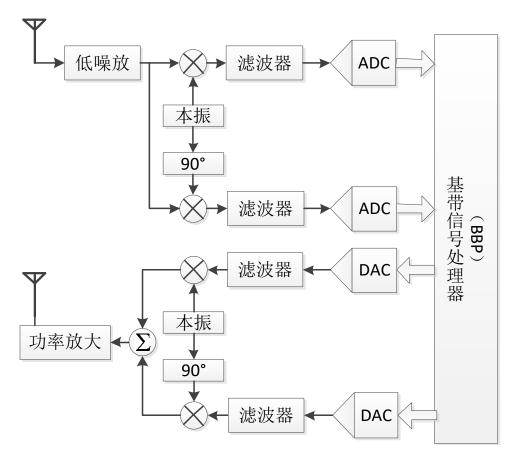

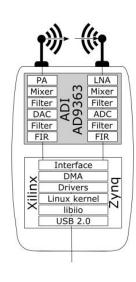

■ 通信系统的组成

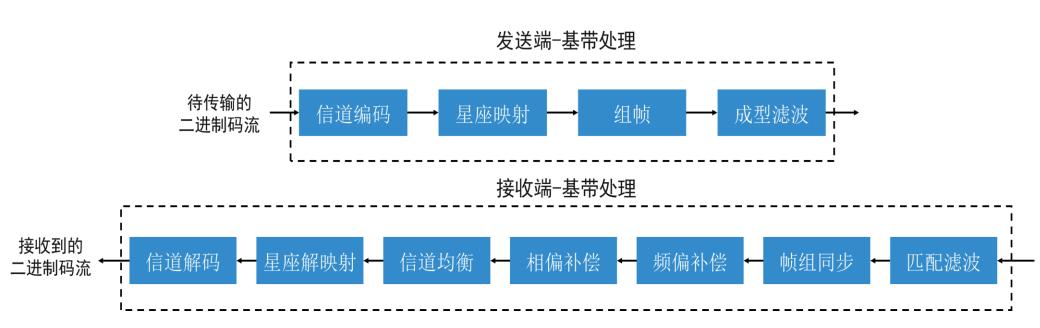

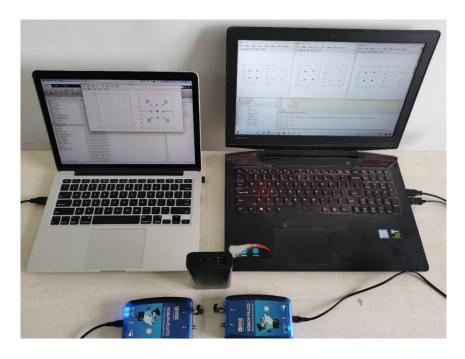

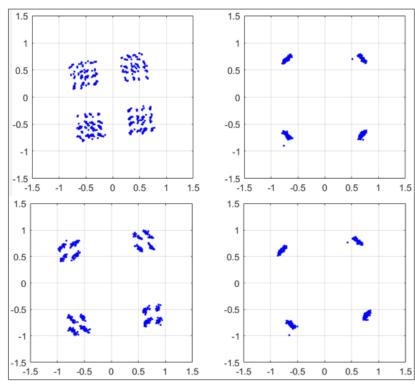

Matlab上基带处理

- 4个具体的实验内容
 - 调制解调 (FSK、ASK、PSK、QAM)
 - 差错控制 (信道编码、交织编码)
 - 同步处理(频偏估计补偿、相偏估计补偿)
 - 信道均衡
 - 调频收音机
 - OFDM

■ 信道均衡

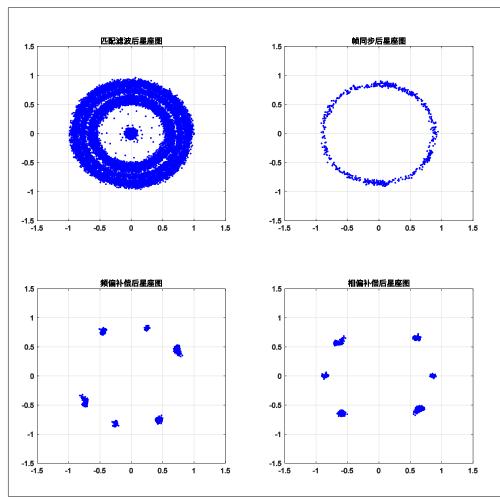

■ 同步处理

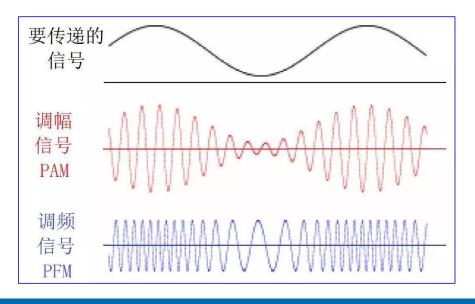

提纲

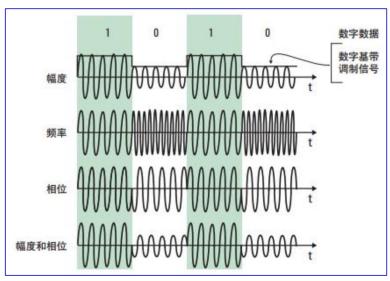

- 数字IQ调制
- ASK、PSK、FSK调制解调
- QAM调制解调
- 实验平台PlutoSDR环境搭建
- 实验任务
- 实验报告要求

■调制

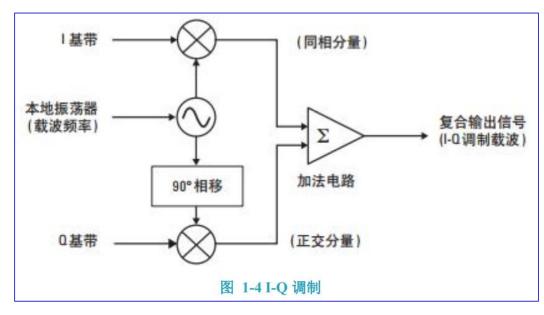

- 将信息量承载到载波的频率、相位、或幅度上
- · 模拟调制:信息的变化是连续的,即载波的频率、相位、或幅 度是连续变化的,AM FM PM
- 数字调制:信息的变化是离散的,即载波的频率、相位、或幅度的变化是离散的、阶跃的 ASK FSK PSK

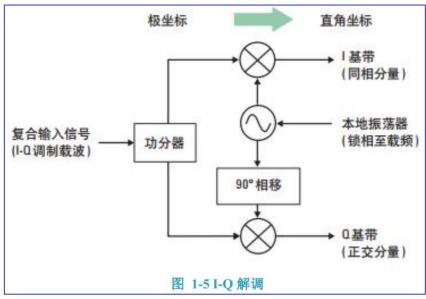

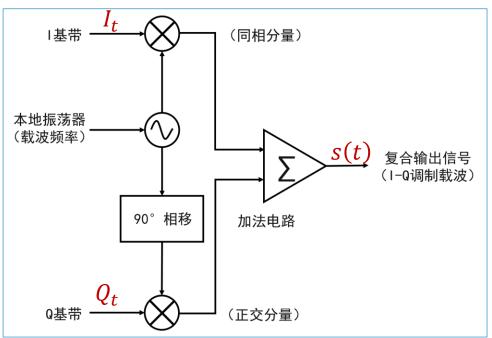

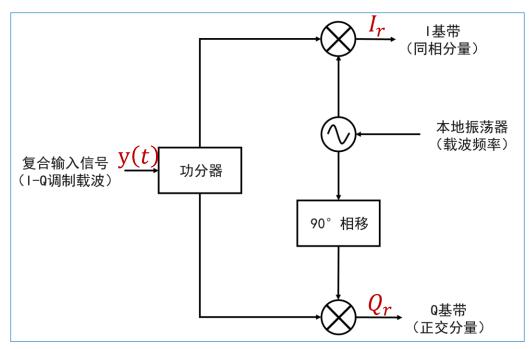

- 数字IQ调制
- 符号映射:将信号比特流转换成I和Q两路信息量
- 正交上变频、正交下变频

(a) I-Q调制

$$s(t) = I_t \cdot cos(\omega_t t) - Q_t \cdot sin(\omega_t t)$$

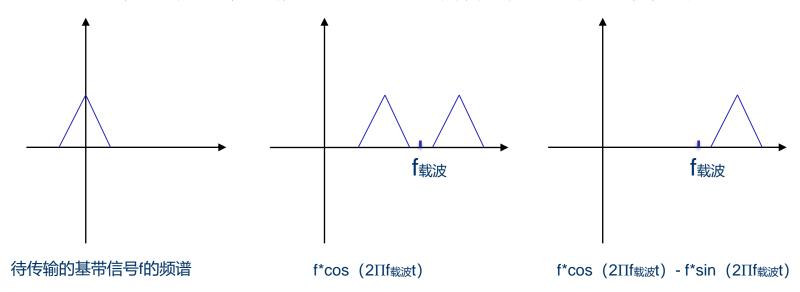

$$I_r = y(t) \cdot \cos(\omega_t t) = [I_t \cdot \cos(\omega_t t) - Q_t \cdot \sin(\omega_t t)] \cdot \cos(\omega_t t); \qquad I_r = \frac{1}{2}I_t$$

$$Q_t = y(t) \cdot [-\sin(\omega_t t)] - [I_t \cdot \cos(\omega_t t) + Q_t \cdot \sin(\omega_t t)] \cdot \sin(\omega_t t); \qquad Q_t = \frac{1}{2}Q_t$$

$$Q_r = y(t) \cdot [-\sin(\omega_t t)] = [I_t \cdot \cos(\omega_t t) + Q_t \cdot \sin(\omega_t t)] \cdot \sin(\omega_t t); \qquad Q_r = \frac{1}{2}Q_t$$

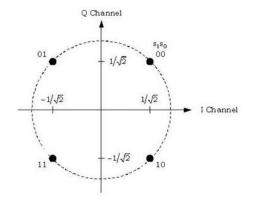

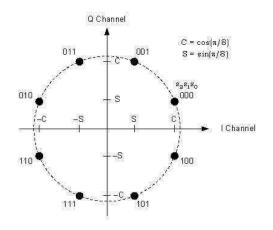

- 为什么要用IQ调制
- 载波的相位的精确控制不容易实现,但是幅度控制容易实现; 通过同时应用载波的幅度和相位两个维度,可以传输更多的信息;通过控制两路正交信号的幅度,等于控制了载波信号的幅度和相位。
- 双边带和单边带的概念(用IQ调制得到的是单边带信号)

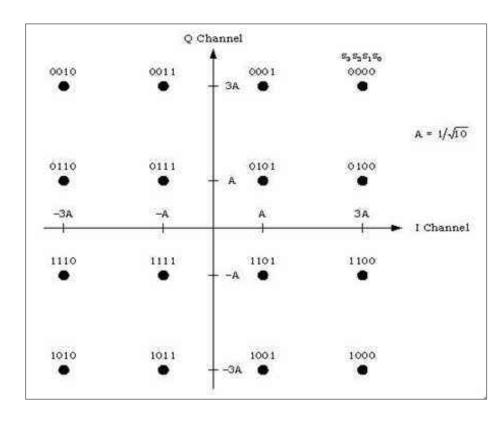

■ 星座图——IQ调制中符号映射的描述

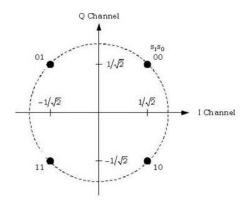

■ 举例

- 待传输信号: 01010011
- 经过信道编码: 010100110010
- 经过符号映射:

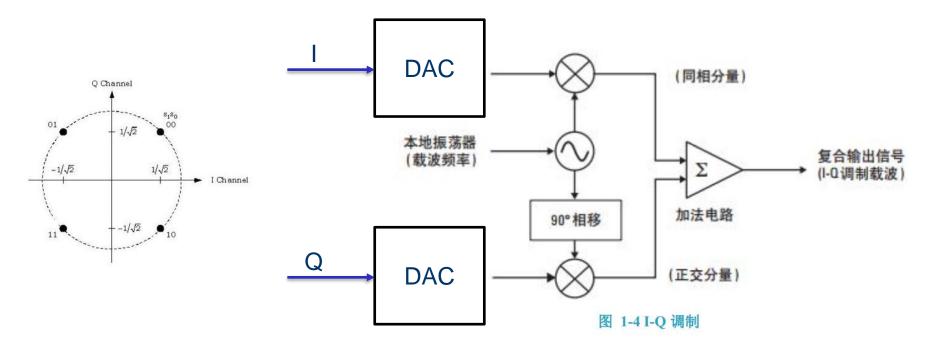

$$1: \frac{1}{\sqrt{2}}, \frac{1}{\sqrt{2}}, \frac{1}{\sqrt{2}}, \frac{1}{\sqrt{2}}, \frac{1}{\sqrt{2}}, \frac{1}{\sqrt{2}}$$

Q:
$$\frac{1}{\sqrt{2}}$$
, $\frac{1}{\sqrt{2}}$, $\frac{1}{\sqrt{2}}$, $\frac{1}{\sqrt{2}}$, $\frac{1}{\sqrt{2}}$, $\frac{1}{\sqrt{2}}$

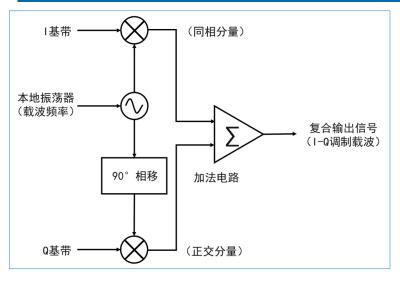

■ 正交上变频

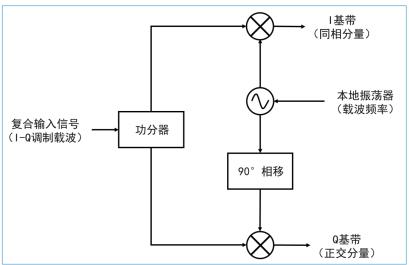

I/Q数据的变化或者更新速度,称为<mark>符号率(码率);</mark> DAC的采样率对应的是最大的符号率; 符号率*(bits/符号)= <mark>比特率</mark>;

ASK调制解调

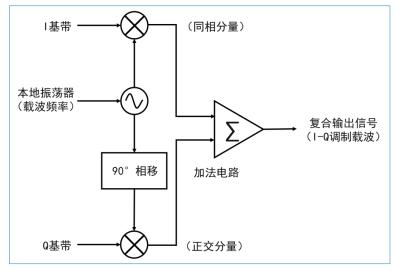

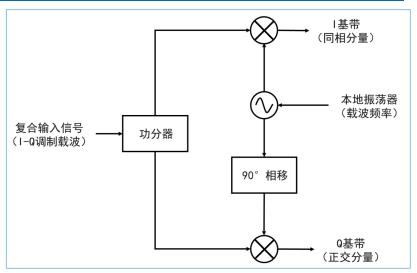

(a) I-Q调制

(b) I-Q解调

ASK调制解调

(a) I-Q调制

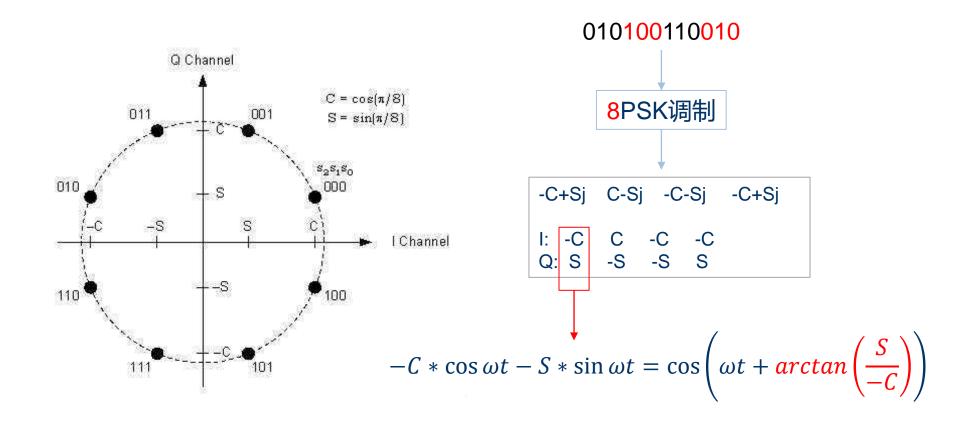

(b) I-Q解调

 010100110010
 4ASK调制
 1): 0.25*4095
 0.25*4095
 0
 1*4095
 ...

 2): 0.25*4095j
 0.25*4095j
 0j
 1*4095j
 ...

 3): 0.25*4095(1+j)
 0.25*4095(1+j)
 0+0j
 1*4095(1+j)
 ...

PSK调制解调

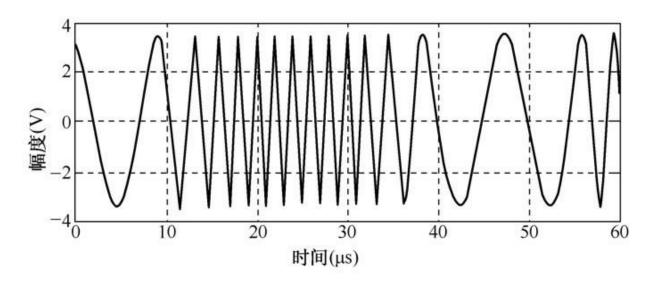

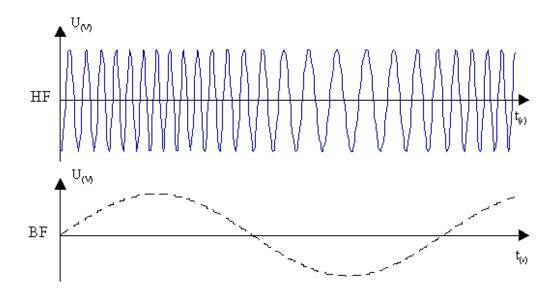

- 没有星座图
- 用载波的频率承载信息

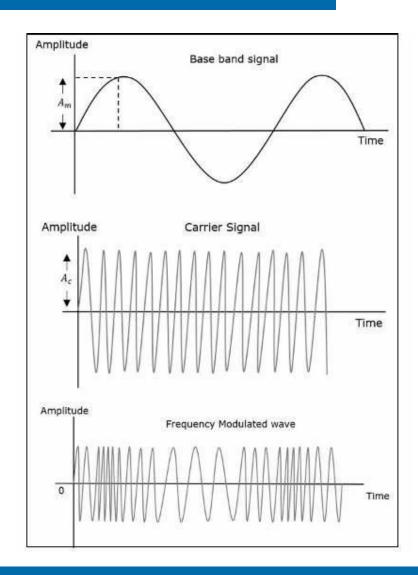

2FSK

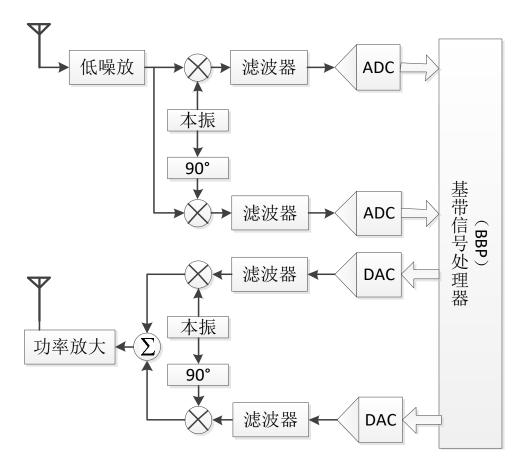

FSK调制解调

- 没有星座图
- 用载波的频率承载信息

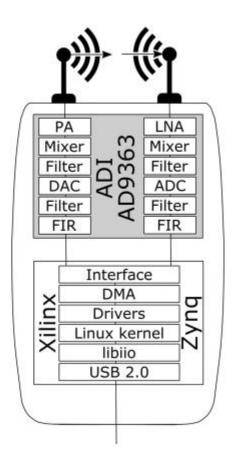

基带信号处理器由 FPGA\DSP+PC两个部分完成

FPGA\DSP和PC之间用 USB|网口|PCIE通信

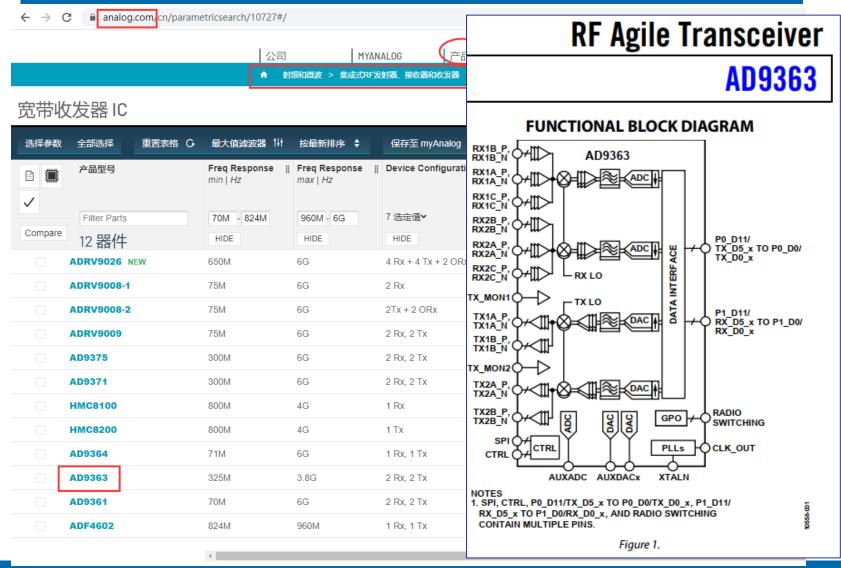

零中频软件无线电SDR的结构框图

PC端开发工具: matlab 和PC端的接口: USB2.0 射频频点: 375MHz-3.8GHz 基带带宽: 20MHz 通道数: 1收1发

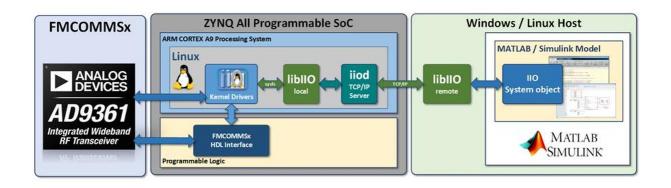

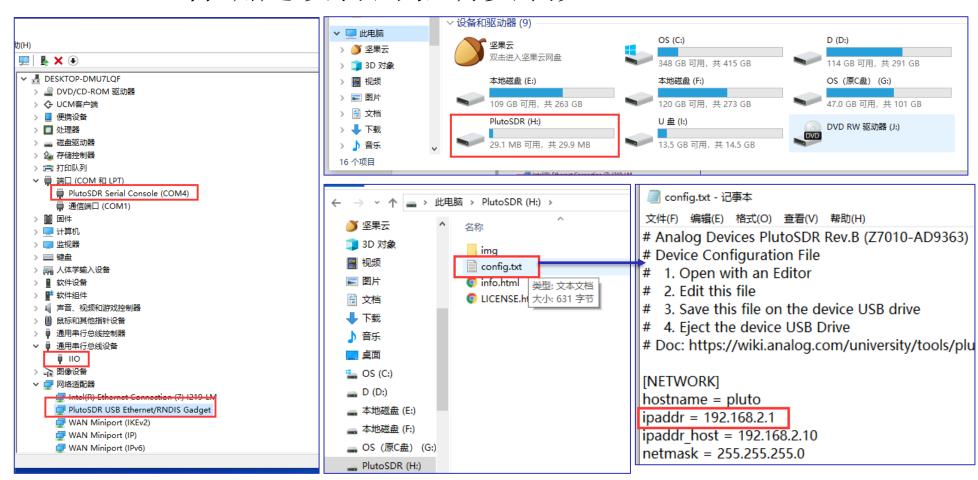

- 安装pluto的设备驱动
- 安装matlab
- 编译器安装TDM-GCC,设置环境变量
- IIO驱动安装

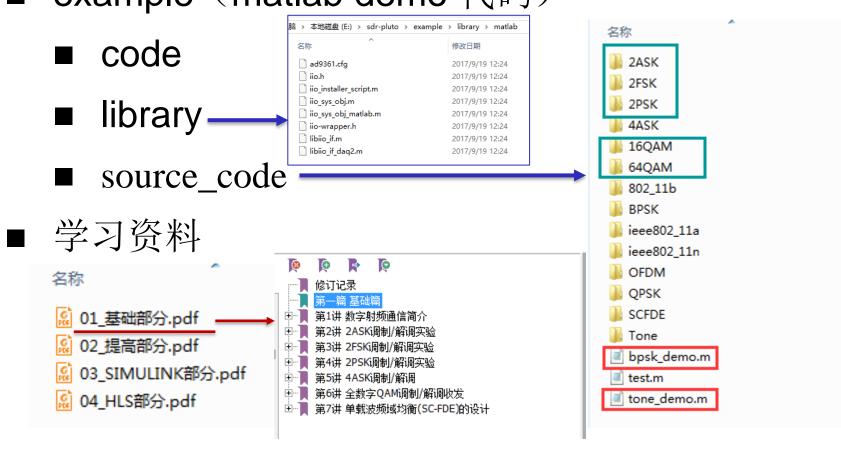

■ 怎样确定设备的驱动安装完整?

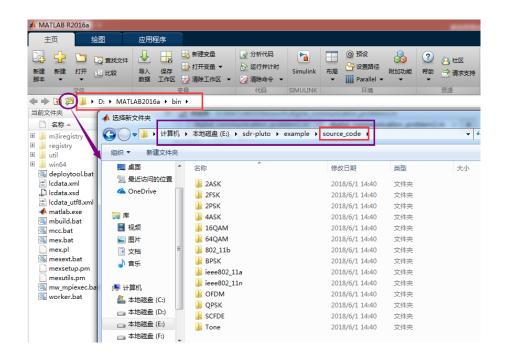

■ example (matlab demo 代码)

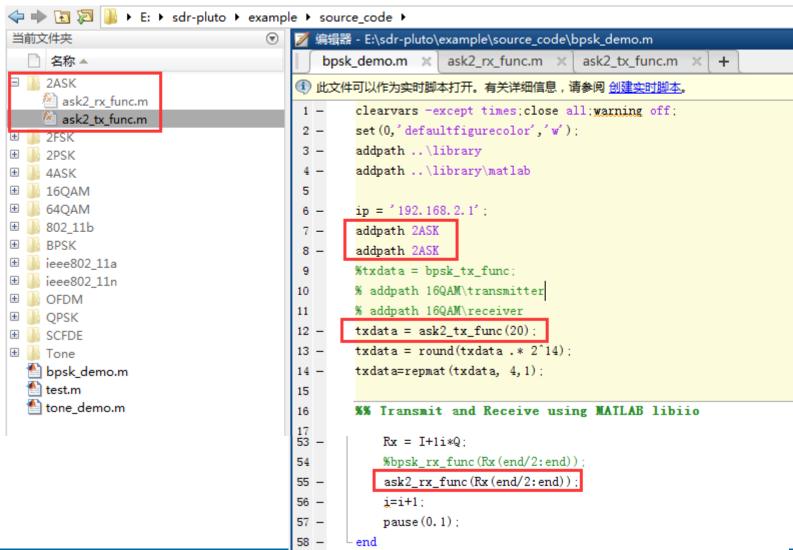

实验任务

- 注意工作路径设置
- 2ASK
- 2FSK
- 2PSK
- 16QAM

```

实验任务-2FSK

实验任务-QAM调制解调

实验报告要求

1 调制解调

一 实验内容

- 1.1 2ASK 幅移键控
- 1.2 2FSK 频移键控
- 1.3 2PSK 相移键控
- 1.4 QAM 调制

二 实验原理

- 2.1 IQ 调制基本原理
- 2.2 2ASK、2PSK、2FSK 的调制解调原理
- 2.3 QAM 调制解调原理

三 实验过程

- 3.1 发送端整体框图
- 3.2 发送端数据帧结构
- 3.3 接收端整体框图
- 3.4 接收时对帧的拆解步骤
- 3.5 QAM 调制解调的具体实现

四 实验结果及分析

五 思考题

- 5.1 实验中的符号率、采样率、比特率各是多少? 之间有怎样的对应关系
- 5.2 你实现的 QAM 映射是格雷映射吗?格雷映射有什么优点?画出你的 QAM 星座图
